

ASUTOSH NAYAK

Senior Java Backend Engineer | Java | Spring Boot | Microservices | AWS

Bhubaneswar, Odisha | +91 63721 58889 | nayakasutosh176@gmail.com | linkedin.com/in/asutosh-nayak-prog

SUMMARY

Java Backend Engineer with 4+ years designing, building, and operating production applications end-to-end using Java 8+, Spring Boot, and MySQL on AWS. Hands-on across the full SDLC: RESTful API design, microservices-based systems, Spring Security, JPA/Hibernate persistence and transaction tuning, JUnit testing, and code-quality gates. Deploys and operates services on AWS (EC2, ALB, RDS, S3, CloudFront, CloudWatch) and diagnoses production issues independently. Full-stack range with Angular; known for converting ambiguous requirements into clear designs and delivering with minimal handholding.

CORE SKILLS

- **Core Java (8+):** Collections Framework, Streams & Lambdas, Exception Handling, Concurrency & Multithreading (ExecutorService), OOP design principles, refactoring legacy code
- **Spring Ecosystem:** Spring Boot, Spring Security (JWT authentication & authorization), Spring Cloud, Spring Data JPA, Spring JDBC, Hibernate ORM, dependency injection, bean lifecycle, transaction management
- **Microservices & APIs:** Microservices architecture, RESTful API design best practices, inter-service communication, third-party service integration, API security, WebSocket, RabbitMQ, Apache Kafka
- **AWS:** EC2, Application Load Balancer (ALB), RDS (MySQL), S3, CloudFront, Route 53, API Gateway, IAM, VPC & security groups, Secrets Manager, CloudWatch (logs, metrics, alerts)
- **Databases:** MySQL - normalization, schema design, complex queries, indexing & query-performance troubleshooting
- **Frontend:** Angular, TypeScript, PrimeNG, Mapbox GL JS, Highcharts, HTML5, CSS3
- **Testing & Quality:** JUnit, SonarQube, code reviews, debugging, production troubleshooting
- **Practices:** Agile/Scrum, clean code, technical documentation, stakeholder requirement clarification, continuous improvement

EXPERIENCE

Cozentus - Assistant Manager, Java (Senior Developer)

Sept 2024 - Present | Bhubaneswar

Risk Monitor - global logistics risk-management platform for PSA BDP (riskmonitor.bdpsmart.com)

- Developing and maintaining backend services in a microservices architecture (Java 8+, Spring Boot) that ingest real-time risk events from multiple authorized external data sources and map them to live shipments across vessels, ports, and warehouses.
- Built the internal impact-evaluation logic that determines whether each risk event affects any tracked shipment or asset - the core decision support used by operations teams.
- Design and expose secure, performant RESTful APIs with clean service layering; tuned JPA/Hibernate fetch strategies and transaction boundaries to keep high-volume geospatial lookups fast.
- Deploy and operate the platform on AWS in production: Spring Boot services on EC2 behind an ALB, managed MySQL on RDS, assets on S3 + CloudFront, DNS via Route 53, secrets in Secrets Manager, access governed by IAM, VPC, and security groups, observability through CloudWatch logs, metrics, and alerts.
- Hardened API security end-to-end - token-based authorization, encrypted sensitive fields, tightened cross-origin resource sharing (CORS) policies.
- Drive quality across the team: lead code reviews, enforce development standards, contribute reusable components and technical documentation.
- Built geospatial intelligence features in Angular - Mapbox shipment/asset plotting, country-level risk heatmaps, and Highcharts trend/distribution dashboards for decision-making.
- Work in Agile ceremonies with cross-functional teams to clarify requirements and incrementally ship client-facing features.

Ohhpro - Full Stack Developer

Mar 2022 - Sept 2024 | Bhubaneswar

Ohhpro Junction - super-app platform for residential societies: visitor management, maintenance fee collection, notice board, and more

- Core member of the team that built and scaled a platform actively used by 100+ societies, reliably processing thousands of requests daily with high reliability.
- Developed responsive Angular frontends and Spring Boot backends; designed RESTful APIs and integrated external services - Razorpay (payments), Exotel (IVR calling), MSG Club (SMS), HubSpot (CRM sync).
- Implemented real-time communication with WebSocket and push notifications via Firebase Cloud Messaging (FCM).
- Offloaded long-running work onto ExecutorService thread pools, keeping request threads responsive under load.
- Secured APIs using JWT tokens, AES encryption for sensitive data, and CORS policies.
- Built the persistence layer with Spring Data JPA, Hibernate, and Spring JDBC over normalized MySQL schemas; wrote efficient queries and resolved slow-query bottlenecks.
- Wrote JUnit unit tests to validate backend behavior; troubleshooted defects and supported production issue resolution.

EDUCATION

- B.Sc. Botany - Utkal University, Bhubaneswar, 2020
- Full Stack Java Development (professional training) - Qspiders, Bhubaneswar, 2021

CERTIFICATIONS

- AWS Certified Developer - Associate - In Progress, expected 2026
